

E Montpelier VT 14 Bridge Project Construction Update – September 16, 2016

Starting on Monday, September 19, construction will begin on the E Montpelier VT 14 Bridge Project. The crew will install erosion control measures (barrier fence, silt fence, stone check dams, etc.) construction signs, and traffic control equipment. The contractor will also mobilize equipment and material to project. Traffic will only be affected between 9 a.m. and 3 p.m. There will be alternating one-way traffic and uniformed traffic officers and flaggers will direct traffic through the area when needed.

This fall's work is an early work package leading up to the larger bridge construction that will not begin until the fall of 2017. It will include installation of four drainage structures (culverts), new utility conduits and a retaining wall that will allow for the installation of a new sidewalk. To minimize the impact on the traveling public, construction will occur at night (6 p.m. to 6 a.m.)

A more detailed description of the project will be given in upcoming construction alerts.
